DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1 and 2 are rejected under 35 U.S.C. 102(b) as being anticipated by Hashimoto, US 6861776. Hashimoto, US 6861776 shows:

A motor, comprising:

At least one lead wire wound around a bobbin 2 of a stator

To form a coil 5;

At least one power line electrically connected to the lead

Wire to supply power to the lead wire;

At least one connection terminal to connect the lead wire

To the power line;

A terminal holding part (sealing resin 40) provided at a portion of the

Bobbin to place the connection terminal;

At least one terminal receiving hole provided in the

Terminal holding part 7 to allow the connection terminal 6

Art Unit: 2834

Connected to the power line to be inserted and connected to the

Lead wire;

A fastening member 8 to accommodate the connection terminal

Connected to the power line therein and to be fastened to the

Terminal holding part so as to keep the connection terminal

Mounted in the terminal receiving hole.

Re claim 2, note protrusion 79 and hook 790 which locks connector 7 and 8 together as described in the paragraph bridging columns 7 and 8.

Allowable Subject Matter

Claims 3-7 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. Claim 3 is allowable because the limitation of "a connection slot provided at a second side thereof to cut an insulation coating of the lead wire" in combination with the remaining structure is neither found nor fairly suggested in the prior art or any combination thereof. Claim 5 is allowable because the limitation of "provided with at least one fastening slot at an opposite side thereof to have a predetermined width, and to allow the lead wire placed in the terminal receiving hole to pass therethrough and be connected to the connection terminal accommodated in the fastening member" in combination with the remaining structure is neither found nor fairly suggested in the prior art or any combination thereof. However, the examiner suggests

Art Unit: 2834

replacing "locking lugs" in claim 5 with —fastening holes—to more clearly define the invention. This change would require the deletion of the term, "second", both occurrences, in claim 8 since no first locking lug is referenced in this claim tree.
